# Potable Water Storage Shed

## Convenience and safety on site

Strad's potable water storage sheds are designed to keep more fresh water on site. With potable water storage on location, customers reduce the frequency of trucks hauling water. This can be cost saving when it comes to transportation as well as increasing safety with fewer trucks on the road.

## Features

**2200 gallon shed comes with:**

- 2200 gallon tank
- Insulated and heated building, two baseboard heaters
- One 30 amp twist-lock plug with 100' of cord
- 2" fill and drain lines
- ¼" drain valve on pump
- 100' of 2" lay-flat hose

**4100 gallon tank:**

- Insulated and heated building
- Two 30 amp twist lock cords, 100' each: one for pump and lights, and one for heater
- 2" fill and drain lines
- Single pump
- Pump on/off switch
- 1" drain on pump
- 200' of 2" lay-flat hose
- Replacement valves for tank and pump discharge

## Advantages

Keeping potable water storage sheds on site means fewer trucks on the road which in turn keeps costs down, and increases safety.

Strad services and maintains all of our equipment for optimal performance in the field, and provides on-site service around-the-clock.
