

## Glycol Heaters

Strad's glycol heaters are designed to be a reliable and cost effective heating option for fluid inside 400 BBL tanks as well as a number of other surface equipment pieces on your well-site.

Strad is now offering these heating units as a great alternative to high cost boilers and eliminating the hazards that come with using boilers. These units burn diesel fuel and use a blower system to heat a food grade biodegradable glycol. The glycol is then circulated through a 1" hose which connects to any surface equipment that has a 1" or 2" steam line installed and keeps the internal fluid of the equipment at a desired temperature.

The glycol heaters are an environmentally friendly source of heating as their footprint can be as little as 1/8<sup>th</sup> the size of a traditional boiler building.

### Glycol Heater Specifications

Size	73" x 31" x 48"
Weight (without skids)	800 lbs dry / 1,700 lbs with fuel
Weight (with skids)	3,200 lbs dry / 4,100 lbs with fuel

### Glycol Heater Features

- Fuel type – diesel
- Heat transfer fluid – propylene glycol
- Burner heat input – 308,000 BTU
- Burner heat output – 261,000 BTU
- Power requirements are 110 volt, 20 amp
- Adjustable fluid temperature from 100 – 200 degrees farenheite
- 85% efficiency
- Run time – 50 hrs

### Glycol Heaters Advantages

The glycol heaters are currently in high demand to heat fluid inside 400 BBL tanks. However, these units can be used with any oilfield equipment that has a 1" or 2" steam line. Glycol units can also connect to Ruffneck Steam Heaters which permit forced air heating in a remote area.

The glycol heaters are an environmentally friendly source of heating as their footprint can be as little as 1/8<sup>th</sup> the size of a traditional boiler building.

These units can run unattended since they're not a boiler device.
