

Timber Mats

Lessen ground disturbance while providing access

Strad understands the need to keep costs under control on a project while still offering ground protection for the environment. Our timber mats are the optimal economical solution.

Our timber mat products are a high quality, cost effective mat solution. Timber mats work well to protect the environment by lessening ground disturbance and also provide access through wet and or marshy conditions.

Timber Mat Features

- Constructed of high quality woods
- Durable and cost effective solution
- Notched or solid ends
- Easy set-up and tear-down
- Ideal alternative for steel-framed rig mats and access matting

Strad is committed to helping develop North America’s resources responsibly and safely. To do this, Strad has continually worked to provide customers with superior solutions and services in the energy, construction, power transmission, pipeline and mining industries. Strad’s Matting Solutions are an example of where we have made a name for ourselves as the leader for innovative and reliable matting products and services.

Our team provides a fully-integrated matting solution by offering rental and purchase options with first-rate service. We are a seasoned team experienced at handling the coordination of all project logistics and being flexible to meet any project need.
